

# Region IV-B (MIMAROPA)

Water Availability for Rice  
Prevailing Stage : None

Harvesting and/or pre-planting stage is possibly ongoing.

Water Availability for Corn  
Prevailing Stage : None

Harvesting and/or pre-planting stage is possibly ongoing.

## Provincial Values Regional Summary

	Mon. Ave. Rainfall (mm)	Rice		Corn	
		CS (%)	RS (%)	CS (%)	RS (%)
Romblon	267.28	I	176.2	I	252.8
		II	166.3	II	202.5
		III	161.9	III	172.4
		IV	161.9	IV	200.9
Palawan	305.31	I	156.8	I	280.1
		II	145.9	II	211.9
		III	141.0	III	174.6
		IV	141.0	IV	209.9
Oriental Mindoro	148.43	I	74.3	I	122.2
		II	69.2	II	93.0
		III	66.9	III	77.2
		IV	66.9	IV	92.2
Occidental Mindoro	148.89	I	50.6	I	89.9
		II	46.7	II	63.7
		III	44.9	III	50.7
		IV	44.9	IV	63.0
Marinduque	174.98	I	107.1	I	187.8
		II	99.1	II	137.8
		III	95.5	III	111.5
		IV	95.5	IV	136.4

Legend :  
■ Inadequate  
■ Sufficient  
■ Excess

The rainfall received during the month was excessive for rice and corn crops in all stages over Romblon, and for the corn crops in all stages over Palawan. Meanwhile, the rest of MIMAROPA received generally sufficient rainfall to support rice and corn crops.

In addition, the SPEI3 generally shows that rainfall was near-normal in the past three months over the entire region. Also, NDVI values over farms areas suggest that crops are generally in good condition, with slight indications of possible crop damage shown over the southern portion of Occidental Mindoro.

Based on the rainfall indices, heavy rainfall could potentially damage existing crops in the Southern portions of Palawan, Mindoro, and Romblon, which are attributed mainly to the ITCZ- and LPA-related events during the month.
