Crop Stage (CS) highlighted in **bold** is the dominant stage during the month of April

Rice CS:
(I) Nursery
(II) Vegetative
(III) Reproductive
(IV) Flowering

Corn CS:
(I) Establishment
(II) Vegetative
(III) Silking
(IV) Reproductive

CCI Category:
Inadequate
Sufficient
Excess

Regional Summary

Most provinces in the Cordillera Administrative Region received inadequate amount of water to support rice and corn crops in all stages, particularly at the prevailing flowering and establishment stages, respectively. Meanwhile, minor portions of farm areas in the provinces of Kalinga, Mountain Province, and Benguet received sufficient water for corn crops in the prevailing establishment stage.

On another hand, SPEI3 depicts near-normal conditions except for central and southwestern parts of the region with slightly drier conditions. Although no detrimental heavy rainfall event occurred during the month, RX1day and RX5day indicate a maximum of 100mm of rain over some parts of Apayao, Abra, Kalinga, and Ifugao.
