

Region IX (Zamboanga Peninsula)

Water Availability for Rice
Prevailing Stage : None

Harvesting and/or
pre-planting
stage is possibly
ongoing.

Water Availability for Corn
Prevailing Stage : None

Harvesting and/or
pre-planting
stage is possibly
ongoing.

Provincial Values

		Mon. Ave. Rainfall (mm)	Rice CS CCI (%)	Corn CS CCI (%)
City of Isabela	141.9		I 40.6	I 87.3
			II 36.2	II 60.6
			III 34.3	III 45.6
			IV 34.3	IV 59.9
Zamboanga del Norte	119.7		I 44.6	I 90.1
			II 40.2	II 62.5
			III 38.3	III 47.3
			IV 38.3	IV 61.7
Zamboanga del Sur	137.0		I 62.1	I 116.0
			II 56.1	II 82.2
			III 53.4	III 63.0
			IV 53.4	IV 81.2
Zamboanga Sibugay	257.0		I 134.2	I 241.1
			II 124.1	II 182.7
			III 119.5	III 148.3
			IV 119.5	IV 181.0

Crop Stage (CS) highlighted in **bold** is the dominant stage during the month of April

Rice CS:
(I) Nursery
(II) Vegetative
(III) Reproductive
(IV) Flowering

Corn CS:
(I) Establishment
(II) Vegetative
(III) Silking
(IV) Reproductive

CCI Category:
Inadequate
Sufficient
Excess

Regional Summary

In several areas of the Zamboanga Peninsula region, the right amount of rainfall was received, which was helpful for preparing the soil for rice paddies. Except for the cities of Isabela and Zamboanga del Norte, where the amount of rainfall may not be sufficient for the preparation of rice fields, it is also possible to prepare the farm for corn planting in the region. The NDVI generally indicates healthy vegetation for any remaining standing crops in the region. The SPEI3 for the past three months suggests that near-normal to above-normal rainfall conditions prevailed over the whole region, which is beneficial for land preparation.

RX1day and RX5days with a maximum rainfall amounting to 100mm and 150mm, respectively, is helpful for land preparation for both rice and corn crops.
