

Region V (Bicol Region)

Water Availability for Rice
Prevailing Stage : None

Harvesting and/or
pre-planting
stage is possibly
ongoing.

Water Availability for Corn
Prevailing Stage : None

Harvesting and/or
pre-planting
stage is possibly
ongoing.

Crop Stage (CS) highlighted in **bold** is the dominant stage during the month of April

Rice CS: (I) Nursery (II) Establishment (III) Vegetative (IV) Reproductive (V) Flowering
Corn CS: (I) Establishment (II) Vegetative (III) Siling (IV) Reproductive
CCI Category: Inadequate Sufficient Excess

Regional Summary

Majority of the provinces in the region have received inadequate amount of rainfall to support the pre-planting activities over its farm areas. This condition may have led to a delay in land preparation for pre-seeding of both rice and corn crops.

Meanwhile, accumulated rainfall over the past three months indicate that generally near-normal conditions are observed in the Bicol region and the NDVI suggested a good vegetation except in certain areas of Masbate. On the other hand, RX1day and RX5day indicate heavy rainfall occurrences in most provinces amounting to a maximum of 200 mm caused by the passage of TD Amang over the region. This may have detrimental effects on the standing crops over the farm areas in Camarines Norte, Camarines Sur, Catanduanes, and Albay.
