Crop Stage (CS) highlighted in **bold** is the dominant stage during the month of April

Rice CS:
(I) Nursery
(II) Vegetative
(III) Reproductive
(IV) Flowering

Corn CS:
(I) Establishment
(II) Vegetative
(III) Siling
(IV) Reproductive

CCI Category:
Inadequate
Sufficient
Excess

Regional Summary

The entire region had insufficient rainfall during the month, which is unfavorable for the preparation of the soil for the planting of rice and corn. Meanwhile, the NDVI shows that most standing crops, if any, are in good condition. The SPEI3 for the past three months indicates that rainfall was near-normal to slightly above normal condition over the region.

There were no major extreme rainfall events throughout the month, according to the RX1day and RX5day indexes. Land preparation for both crops could not have been done in this situation.
