		III	112.5	III	153.0
		IV	159.9	IV	184.7

Crop Stage (CS) highlighted in **bold** is the dominant stage during the month of August

Rice CS: (I) Nursery (II) Vegetative (III) Reproductive (IV) Ripening
Corn CS: (I) Establishment (II) Vegetative (III) Reproductive (IV) Maturity
CCI Category: Inadequate (Yellow), Sufficient (Green), Excess (Blue)

Regional Summary

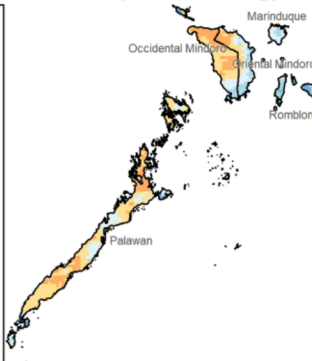

Except for Marinduque and Occidental Mindoro, the region received sufficient water supply for rice crops during the month. Inadequate water supply was observed in the Marinduque province, while excessive water supply was observed in the province of Occidental Mindoro. On the other hand, harvesting and/or pre-planting stages for corn crops are possibly ongoing in the region.

Meanwhile, the one-day (RX1day) and five-day (RX5day) extreme rainfall indices recorded a maximum rainfall that is about 150 mm. Rainfall was notable and pronounced in the latter part of the month, as shown in the daily rainfall chart. The three-month agricultural drought indicator (SPEI3) showed that the region experienced a slightly drier condition for the western section of the region while slightly wetter in the eastern section.
