		IV	634.5	IV	739.9

Crop Stage (CS) highlighted in **bold** is the dominant stage during the month of February

Rice CS: (I) Nursery, (II) Vegetative, (III) Reproductive, (IV) Ripening
 Corn CS: (I) Establishment, (II) Vegetative, (III) Reproductive, (IV) Maturity
 CCI Category: Inadequate (yellow), Sufficient (green), Excess (blue)

Regional Summary

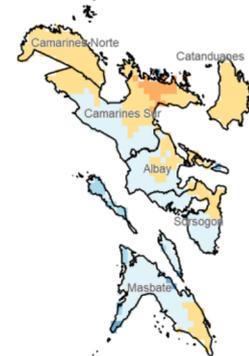

The rainfall received for the month was generally excessive for the whole Bicol Region. This might have caused potential damage on both standing rice and corn crops at any of the crop stages.

Meanwhile, the SPEI3 indicates near normal conditions experienced for the past three months. The rainfall extreme indices, however, show notable extreme rainfall with maximum 1-day rainfall of about 100-250mm and maximum 5-day rainfall of about 200-400mm and above. This might have caused possible impacts on both standing rice and corn crops. The extreme rainfall was mainly attributed to the rainfall from the Northeast Monsoon, shear line, and localized thunderstorms during the first week of the month.
