		IV	256.5	IV	296.6

Crop Stage (CS) highlighted in **bold** is the dominant stage during the month of March

Rice CS:  
(I) Nursery  
(II) Vegetative  
(III) Reproductive  
(IV) Ripening

Corn CS:  
(I) Establishment  
(II) Vegetative  
(III) Reproductive  
(IV) Maturity

CCI Category:

Inadequate

Sufficient

Excess

## Regional Summary

Most of BARMM Region received excessive rainfall during the month. Meanwhile, Lanao del Sur and Maguindanao and portions of Tawi-Tawi received adequate rainfall, this may be favorable for pre-planting and land preparation activities of rice and corn crops. Moreover, slightly wetter conditions for the past three months have been experienced as indicated by the SPEI3.

Nonetheless, NDVI indicates that the Region's vegetation is healthy over the Region but only holds true if these periods of intense rainfall are not experienced. In addition, maximum 1-day (50-100 mm) and 5-day (150-250 mm) rainfall brought by the easterlies during the 3<sup>rd</sup> week of the month may have brought significant impact on the farm areas.
