

Region I (Ilocos Region)

Water Availability for Rice
Prevailing Stage : (III) Reproductive

Water Availability for Corn
Prevailing Stage : None

Harvesting and/or
pre-planting
stage is possibly
ongoing.

Provincial Values

	Mon. Ave. Rainfall (mm)	Rice		Corn	
		CS	CCI (%)	CS	CCI (%)
Ilocos Norte	23.6	I	2.2	I	5.6
		II	1.9	II	3.3
		III	1.8	III	2.3
		IV	3.7	IV	3.3

Crop Stage (CS) highlighted in black is the dominant stage during the month of March

Rice CS:
(I) Nursery
(II) Vegetative
(III) Reproductive
(IV) Ripening

Corn CS:
(I) Establishment
(II) Vegetative
(III) Reproductive
(IV) Maturity

CCI Category:
Inadequate
Sufficient
Excess

Regional Summary

Rainfall amount for the entire Region was very minimal during the month, which could not be enough to support standing rice and corn crops in the area. Maximum rainfall was only around 50 mm (see *RX1day* and *RX5day*), indicating that water stress is possible, especially in the prevailing Reproductive stage of rice crops of the Region.

However, the Region for the past three months was in slightly wetter conditions (see *SPEI3*), suggesting that with the aid of an irrigation system, water stress will be manageable.
