Crop Stage (CS) highlighted in black is the dominant stage during the month of March

Rice CS:
(I) Nursery
(II) Vegetative
(III) Reproductive
(IV) Ripening

Corn CS:
(I) Establishment
(II) Vegetative
(III) Reproductive
(IV) Maturity

CCI Category:
Inadequate
Sufficient
Excess

Harvesting and/or
pre-planting
stage is possibly
ongoing.

Water Availability for Corn
Prevailing Stage : (IV) Maturity

Regional Summary

The rainfall received for the month was generally sufficient for both crops at any stage. Only Negros Oriental received inadequate rainfall for its first three stages of rice crops and during the Reproductive stage of the corn crops. Both crops are generally in good condition, especially in those areas with sufficient rainfall while some portions of Negros Oriental had slightly stressed crops as shown in the NDVI map.

The SPEI3 indicates generally near normal conditions in the Region. The extreme rainfall (RX1day and RX5day) also indicates that the northern portion of Cebu received 200-250mm of rainfall due to shear line and easterlies.
