Crop Stage (CS) highlighted in **bold** is the dominant stage during the month of May

Rice CS:
 (I) Nursery
 (II) Vegetative
 (III) Reproductive
 (IV) Ripening

Corn CS:
 (I) Establishment
 (II) Vegetative
 (III) Reproductive
 (IV) Maturity

CCI Category:
 Inadequate
 Sufficient
 Excess

Regional Summary

Inadequate rainfall in the BARMM region during the month may have hindered the growth of newly planted rice or rice crops in its nursery stage and could possibly make farming operations more difficult. Relatively low NDVI values are observed in some parts of the region, but crops are generally in good condition.

The SPEI3 map indicated that most of the provinces in the region may have experienced dry conditions, while the RX1day and RX5day indices showed monthly rainfall ranges from 50–100 mm, respectively, consistent with the region's present dry conditions.
