Pangasinan	204.6	I	45.2	I	106.2
		II	40.2	II	68.7
		III	38.0	III	50.1
		IV	71.4	IV	67.7

Crop Stage (CS) highlighted in black is the dominant stage during the month of May

Rice CS: (I) Nursery, (II) Vegetative, (III) Reproductive, (IV) Ripening
Corn CS: (I) Establishment, (II) Vegetative, (III) Reproductive, (IV) Maturity
CCI Category: Inadequate (yellow), Sufficient (green), Excess (blue)

Regional Summary

Throughout the month, the region had sufficient water supply to support rice and corn crops at almost all cropping stages. Rainfall indices indicate a maximum rainfall ranging from 100 to 250 mm. Rainfall was more pronounced in the northern part of the region. This can also be observed in the SPEI3 map, which shows that the northern region experienced slightly wetter conditions. The NDVI map, on the other hand, showed generally healthy conditions except for the southern part of the region.

Generally, no extreme weather events occurred in the region throughout the month that could cause harm to the rice and corn crops of the area.
