Crop Stage (CS) highlighted in black to the dominant stage during the month of May

Rice CS: (I) Nursery, (II) Vegetative, (III) Reproductive, (IV) Ripening
Corn CS: (I) Establishment, (II) Vegetative, (III) Reproductive, (IV) Maturity
CCI Category: Inadequate (Yellow), Sufficient (Green), Excess (Blue)

Regional Summary

All throughout the region, sufficient amount of rainfall has been received, which is advantageous for corn crops in their establishment stage and continuous land preparation for rice paddies over the region.

As can be observed from the three-month SPEI3 accumulated rainfall map, most provinces in the region have seen below-normal rainfall and somewhat drier conditions.

The RX1day and RX5day maps show that the greatest amount of rainfall is expected to be between 50mm and 150 mm respectively over Zamboanga Sibugay which is possible for land preparation on rice paddies.
