## Regional Summary

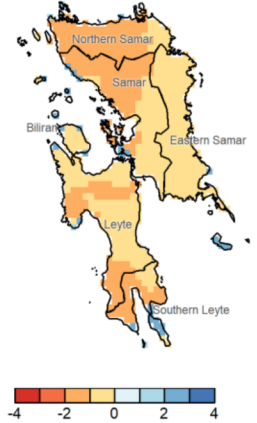

A sufficient amount of rainfall was received by some provinces (Biliran, Eastern Samar, and Samar) in the Eastern Visayas region to support the rice and corn crops during their nursery and vegetative stages, respectively. However, the remaining provinces in the region did not receive enough rainfall to support the crops during their growing stage.

In the SPEI3, the three-month total rainfall was below the normal rainfall condition, with most provinces in the region experiencing slightly drier conditions. Despite Typhoon AGHON effects from May 23 to 29, the RX1day and RX5day maps indicates a maximum rainfall of 150 mm to 250 mm in Biliran, as well as in certain areas of Northern part of Leyte and the province of Eastern Samar, which provides advantageous conditions for planting season operations.
