Crop Stage (CS) highlighted in **bold** is the dominant stage during the month of May

Rice CS:
(I) Nursery
(II) Vegetative
(III) Reproductive
(IV) Ripening

Corn CS:
(I) Establishment
(II) Vegetative
(III) Reproductive
(IV) Maturity

CCI Category:
 Inadequate
 Sufficient
 Excess

Regional Summary

There were no prevailing crop stages in the region for the month. Probably, both rice and corn crops are in harvesting and/or pre-planting stages.

For the weather conditions for the month, the region experienced easterlies, LPA, and localized thunderstorms that brought maximum rains ranging from 50 to 100 mm. The SPEI3, on the other hand, showed that the region was generally in wetter conditions. Hence, such conditions were favorable for the land preparation for the next cropping period.
