

# Region V (Bicol Region)

Water Availability for Rice  
Prevailing Stage : None

Harvesting and/or  
pre-planting  
stage is possibly  
ongoing.

Water Availability for Corn  
Prevailing Stage : (I) Establishment

## Provincial Values

		Mon. Ave. Rainfall (mm)	Rice CS CCI (%)	Corn CS CCI (%)
Albay	I	150.9	53.8	101.2
	II		49.3	76.1
	III		47.2	60.6
	IV		73.8	75.3
Camarines Norte	I	169.3	70.0	124.1
	II		64.5	91.6
	III		62.0	72.7
	IV		94.8	90.7
Camarines Sur	I	168.4	65.6	135.8
	II		60.8	97.9
	III		58.6	78.2
	IV		88.9	96.8
Catanduanes	I	155.9	62.4	125.9
	II		57.5	95.2
	III		55.3	77.5
	IV		85.6	94.3
Masbate	I	125.8	51.3	121.4
	II		46.2	85.0
	III		43.8	65.2
	IV		74.2	83.9
Sorsogon	I	121.6	51.2	106.2
	II		46.7	78.1
	III		44.6	62.2
	IV		71.1	77.3

Crop Stage (CS) highlighted in bold is the dominant stage during the month of May

Rice CS: (I) Nursery (II) Vegetative (III) Reproductive (IV) Ripening  
Corn CS: (I) Establishment (II) Vegetative (III) Reproductive (IV) Maturity  
CCI Category: Inadequate (yellow), Sufficient (green), Excess (blue)

## Regional Summary

The water supply in the entire Bicol Region was sufficient in almost all of the cropping stages of rice and corn during the month. This means that weather conditions for the past month were favorable for the rice and corn crops in the region and could potentially bring better production, subject to future weather conditions and other factors.

Furthermore, the SPEI3 map revealed that the entire region has been in near normal to wetter conditions for the past three months. The maximum rainfall indices showed a maximum rainfall that is around 100-150 mm, which was experienced in the first and last week of the month.
