Crop Stage (CS) highlighted in black to the dominant stage during the month of May

Rice CS: (I) Nursery (II) Vegetative (III) Reproductive (IV) Ripening

Corn CS: (I) Establishment (II) Vegetative (III) Reproductive (IV) Maturity

CCI Category: Inadequate Sufficient Excess

## Regional Summary

The rainfall received in Eastern Visayas was sufficient for both crops, particularly for farm areas with corn crops in the prevailing vegetative stage and the rice crops in the prevailing nursery stage.

The SPEI3 index indicates slightly wetter conditions in most areas of Samar, Leyte, and Eastern Samar for the past three months. The extreme rainfall indices (RX1day and RX5day) indicate that there is no notable heavy rainfall recorded. The maximum rainfall for a single day reached up to 100mm, while the maximum cumulative rainfall over five days reached 150mm.

## NDVI

NDVI satellite data not yet available.

## SPEI3 (Mar-Apr-May)

## RX1day

## RX5day
