

# Cordillera Administrative Region

Water Availability for Rice  
Prevailing Stage : None

Water Availability for Corn  
Prevailing Stage : (II) Vegetative

## Provincial Values

	Mon. Ave. Rainfall (mm)	Rice		Corn	
		CS	CCI (%)	CS	CCI (%)
Abra	360.7	I	131.3	I	203.9
		II	123.9	II	160.5
		III	120.5	III	135.1
		IV	120.5	IV	159.2
Apayao	500.6	I	303.3	I	519.6
		II	284.6	II	405.2
		III	276.1	III	336.7
		IV	276.1	IV	401.7
Benguet	309.0	I	155.6	I	289.7
		II	146.3	II	233.5
		III	142.1	III	198.7
		IV	142.1	IV	231.8
Ifugao	293.5	I	152.4	I	245.5
		II	144.4	II	199.7
		III	140.7	III	171.5
		IV	140.7	IV	198.3
Kalinga	398.2	I	189.1	I	315.9
		II	178.9	II	254.0
		III	174.2	III	216.5
		IV	174.2	IV	252.1
Mountain Province	337.5	I	191.8	I	349.2
		II	180.5	II	272.2
		III	175.4	III	227.8
		IV	175.4	IV	269.9

Crop Stage (CS) highlighted in black to the dominant stage during the month of November

Rice CS: (I) Nursery, (II) Vegetative, (III) Reproductive, (IV) Ripening  
Corn CS: (I) Establishment, (II) Vegetative, (III) Reproductive, (IV) Maturity  
CCI Category: Inadequate (yellow), Sufficient (green), Excess (blue)

## Regional Summary

Most of the provinces in Cordillera Administrative Region, except Apayao, received rainfall that is sufficient for all stages of rice, although farms were likely going through the post-harvesting and pre-planting activities during the month. Only the corn crops in the prevailing vegetative stage over Abra and Ifugao received sufficient rainfall, and the same crops in other provinces were affected by excess rainfall.

The past 3-months have brought above normal rainfall to most provinces in the Region (see NDVI). With the availability of effective irrigation and drainage system, crops could have grown properly, except for those on the northeastern side of Apayao. Apayao received a maximum of 250-300mm of one-day rainfall and a maximum of >400mm of five-day rainfall. These excess rainfall are attributed to the TCs that affected CAR.
