(II) Vegetative  
(III) Reproductive  
(IV) Maturity

CCI Category:  
 Inadequate  
 Sufficient  
 Excess

## Regional Summary

The province Marinduque and Romblon received sufficient amount of rainfall for all crop stages. This amount is favorable for standing crops especially the corn crops at the prevailing vegetative stage. Meanwhile, inadequate amount of water was observed for Occidental Mindoro, Oriental Mindoro, and Palawan provinces for rice crops at all crop stages.

The three-month accumulated rainfall as shown in the SPEI3 map indicates that the northern part of the region was relatively wetter as compared to its southern part. Furthermore, there were no observed extreme rainfall event/s that may have influenced the region, as shown in RX1day and RX5day maps (ranging from 0 to 100 mm).
