Crop Stage (CS) highlighted in black as the dominant stage during the month of November

Rice CS: (I) Nursery, (II) Vegetative, (III) Reproductive, (IV) Ripening
Corn CS: (I) Establishment, (II) Vegetative, (III) Reproductive, (IV) Maturity
CCI Category: Inadequate (yellow), Sufficient (green), Excess (blue)

Regional Summary

Rainfall for the month was sufficient for rice and corn crops at the following prevailing stages: rice crops at the prevailing nursery stage and corn crops at the prevailing maturity stage in Aklan and Capiz, and corn crops at the prevailing maturity stage in Iloilo and Negros Occidental. Meanwhile, inadequate rainfall for the month could cause potential damage on both rice and corn crops in the rest of the region.

In addition, the SPEI3 indicates generally near normal conditions experienced in most parts of the region except in Aklan and parts of Negros Occidental with slightly wetter than normal experienced for the past three months. The NDVI shows vegetation in generally healthy condition for the month. There was no significant extreme rainfall that might have caused damage on both rice and corn crops in the region based on the RX1day and RX5day indices.
