Crop Stage (CS) highlighted in **black** is the dominant stage during the month of November

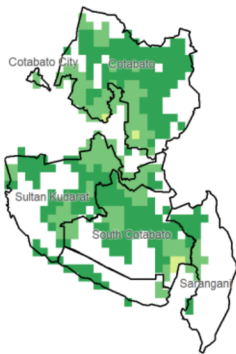

Rice CS: (I) Nursery, (II) Vegetative, (III) Reproductive, (IV) Ripening
 Corn CS: (I) Establishment, (II) Vegetative, (III) Reproductive, (IV) Maturity
 CCI Category: Inadequate (yellow), Sufficient (green), Excess (blue)

Regional Summary

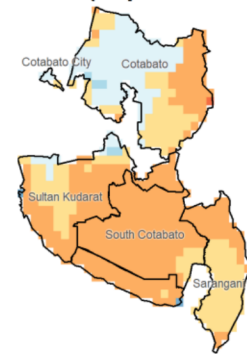

Sufficient amount of rainfall was favorable for the rice crops in the SOCCSKSARGEN region. Along with corn crops, this amount (sufficient) was also noted for rice crops across the region, except for South Cotabato and Sarangani, where inadequate amount of rainfall was noted.

Based on the three-month accumulated rainfall as shown in the SPEI3 map, most of the provinces in SOCCSKSARGEN experienced slightly drier conditions, except for some parts of Cotabato and Cotabato City. Nevertheless, the NDVI map further indicates healthy conditions over the farm areas in most provinces in the region. Although no detrimental heavy rainfall event that occurred during the month, RX5day indicates an accumulation of 100-150mm of rain. Rainfall over these areas were caused by the Intertropical Convergence Zone (ITCZ) during the last week of the month.
