

# Region I (Ilocos Region)

## Provincial Values

|              | Mon. Ave. Rainfall (mm) | Rice CS CCI (%) | Corn CS CCI (%) |
|--------------|-------------------------|-----------------|-----------------|
|              |                         |                 |                 |
| Ilocos Norte | 168.4                   | I 78.6          | I 147.2         |
|              |                         | II 70.8         | II 108.0        |
|              |                         | III 67.1        | III 82.9        |
|              |                         | IV 67.1         | IV 106.8        |
| Ilocos Sur   | 127.6                   | I 66.6          | I 149.5         |
|              |                         | II 60.2         | II 103.6        |
|              |                         | III 57.2        | III 78.6        |
|              |                         | IV 57.2         | IV 102.3        |
| La Union     | 146.3                   | I 89.2          | I 171.2         |
|              |                         | II 80.8         | II 127.9        |
|              |                         | III 76.8        | III 102.1       |
|              |                         | IV 76.8         | IV 126.7        |
| Pangasinan   | 181.7                   | I 80.4          | I 157.3         |
|              |                         | II 73.7         | II 115.9        |
|              |                         | III 70.6        | III 92.0        |
|              |                         | IV 70.6         | IV 114.7        |

Crop Stage (CS) highlighted in black is the dominant stage during the month of October

Rice CS: (I) Nursery (II) Establishment (III) Reproductive (IV) Ripening

Corn CS: (I) Establishment (II) Vegetative (III) Reproductive (IV) Maturity

CCI Category: Inadequate (Orange), Sufficient (Green), Excess (Blue)

## Regional Summary

The amount of rainfall observed in the Ilocos region during October was sufficient to support rice and corn crops at all stages. This amount is sufficient to sustain the standing corn crops especially those at the prevailing establishment stage, as well as the possible ongoing harvesting/pre-planting activities for rice crops throughout the region. NDVI map indicated a generally good vegetative condition and may represent the prevailing establishment condition for corn crops in the region.

SPEI3 indicated near-normal conditions in the region, except for the eastern portion of Ilocos Norte which experienced slightly drier condition. The RX1day showed 50 to 100 millimeters of rainfall while the RX5day reaches to about 50 to 150 millimeters. Such amount of rainfall might have been beneficial for the establishment stage of corn crops in the region for the month of October.
