## Regional Summary

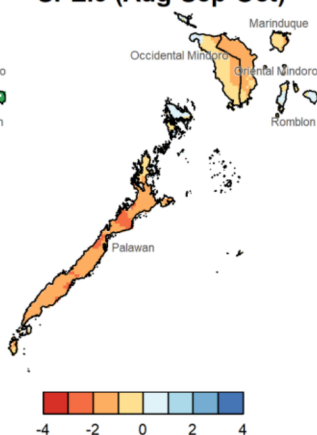

The rainfall received for the month was sufficient to support both rice and corn crops in almost the entire region except for some areas in Romblon province where excessive rainfall amount was observed. Such amount may have caused damaged on corn crops particularly those at the prevailing establishment stage. The NDVI suggested healthy vegetation for both rice and corn crops in the entire region. Slightly drier conditions were experienced in some parts of Palawan while near-normal conditions were experienced for the rest of the region.

The enhanced monsoon due to Typhoon Jenny and the trough of LPA during the first half of the month brought significant rainfall amount over the northern portions of Occidental Mindoro and Palawan as shown in both RX1day and RX5day with maximum rainfall of about 50-100mm and 100-200mm, respectively.
