		III	177.2	III	222.5
		IV	177.2	IV	247.8

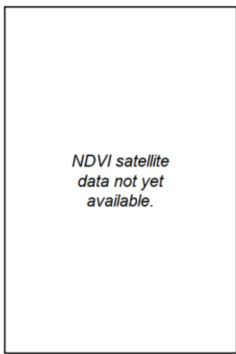

Crop Stage (CS) highlighted in black is the dominant stage during the month of October.

Rice CS: (I) Nursery, (II) Vegetative, (III) Reproductive, (IV) Ripening
 Corn CS: (I) Establishment, (II) Vegetative, (III) Reproductive, (IV) Maturity
 CCI Category: Inadequate (yellow), Sufficient (green), Excess (blue)

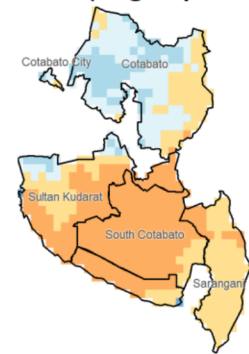

Regional Summary

The rainfall received was sufficient for rice crops at any of the crop stages in most parts of Sultan Kudarat. Excessive rainfall could have caused damage on both rice and corn crops in the northern portion of the region (Cotabato and Cotabato City) as well as the corn crops in Sultan Kudarat. Generally inadequate rainfall might have caused potential damage on rice and corn crops at Sarangani and South Cotabato. The SPEI3 further indicates slightly wetter than normal condition in parts of Cotabato and Cotabato City, while slightly drier than normal conditions in most parts of Sultan Kudarat and South Cotabato, and generally near normal conditions for the rest of the region. The excessive rainfall and wetter than normal conditions were mainly attributed to the through of the tropical cyclone Kristine during the fourth week of the month and localized thunderstorms.
