Regional Summary

Except for the Mindoro provinces, the region received sufficient water supply for rice crops during the month. Excessive water supply was observed in the remaining provinces. Harvesting and/or pre-planting stages for corn crops are possibly ongoing in the region but all provinces except Marinduque and Palawan received excess rainfall in those stages.

Meanwhile, the one-day (RX1day) and five-day (RX5day) extreme rainfall indices recorded a maximum rainfall that is about 150 mm and 350 mm respectively. Rainfall was notable and pronounced in the middle part of the month, as shown in the daily rainfall chart, and this is possibly due to TC Gener influencing the southwest monsoon. The three-month agricultural drought indicator (SPEI3) showed that the region experienced a slightly drier condition in the region for Palawan, Occidental Mindoro, and some parts in Oriental Mindoro.
