

Region VI (Western Visayas)

Water Availability for Rice
Prevailing Stage : None

Harvesting and/or pre-planting stage is possibly ongoing.

Water Availability for Corn
Prevailing Stage : (II) Vegetative

Provincial Values

	Mon. Ave. Rainfall (mm)	Rice		Corn	
		CS	CCI (%)	CS	CCI (%)
Aklan	402.1	I	357.0	I	442.0
		II	347.4	II	371.2
		III	343.0	III	327.8
		IV	343.0	IV	369.0
Antique	352.9	I	145.8	I	194.1
		II	140.5	II	162.5
		III	138.1	III	142.7
		IV	138.1	IV	161.5
Capiz	246.9	I	282.2	I	434.6
		II	276.6	II	398.9
		III	274.0	III	377.6
		IV	274.0	IV	397.8

		III	233.5	III	320.6
		IV	233.5	IV	347.2

Crop Stage (CS) highlighted in **black** is the dominant stage during the month of September

Rice CS: (I) Nursery, (II) Vegetative, (III) Reproductive, (IV) Ripening
Corn CS: (I) Establishment, (II) Vegetative, (III) Reproductive, (IV) Maturity
CCI Category: Inadequate (Yellow), Sufficient (Green), Excess (Blue)

Regional Summary

Majority of the provinces in Western Visayas received excessive amount of rainfall, which could have been damaging to corn crops at the prevailing vegetative stage and might influence the expected harvesting and/or pre-planting stage of rice crops. Meanwhile, there was sufficient amount of water available in the province of Antique to sustain both rice and corn crops during the entire cropping stages.

SPEI3 map has mainly seen near-normal conditions for the past three months, except for certain areas in Aklan, Capiz, Iloilo, and Negros Occidental where slightly wetter condition was observed. Moreover, slightly drier conditions may be experienced over minor portions of Negros Occidental.

The RX1day and RX5day indicates maximum 1-day and 5-day rainfall of 50-150mm and 100-250mm, respectively, which may have brought potential damage on both rice and corn crops in Antique and Aklan. This extreme rainfall was mainly attributed to the monsoon rains during the 2nd week of the month.
