Crop Stage (CS) highlighted in **yellow** is the dominant stage during the month of April

Rice CS:
(I) Nursery
(II) Vegetative
(III) Reproductive
(IV) Ripening

Corn CS:
(I) Establishment
(II) Vegetative
(III) Reproductive
(IV) Maturity

CCI Category:
Yellow: Inadequate
Green: Sufficient
Blue: Excess

Regional Summary

The rainfall recorded across the region was inadequate, resulting in mostly dry condition. This likely caused potential damages on both rice and corn crops at any of the crop stages in the whole region.

Based on the 3-month SPEI3 data, near normal to slightly drier conditions were observed mostly over the region.

There were no significant widespread rainfall events for the month that might have affected any crops in the region, based on both RX1day and RX5day data
