Crop Stage (CS) highlighted in **bold** is the dominant stage during the month of March

Rice CS:

- (I) Nursery
- (II) Vegetative
- (III) Reproductive
- (IV) Ripening

Corn CS:

- (I) Establishment
- (II) Vegetative
- (III) Reproductive
- (IV) Maturity

CCI Category:

- Inadequate
- Sufficient
- Excess

Regional Summary

The region experienced a rainfall deficit this month, negatively affecting rice and corn crops at all developmental phases. Concurrently, land preparation for these crops was likely in progress.

The NDVI shows that existing crops are in generally good condition. Meanwhile, the SPEI3 indicates that all provinces have experienced slightly below-normal rainfall and slightly drier conditions over the past three months. Analysis of extreme rainfall indices revealed a maximum 1-day rainfall (RX1day) of 50 mm and a maximum 5-day rainfall (RX5day) of 100 mm.
