

Issued: 04 March 2021

OVERVIEW

La Niña continues to persist in the tropical Pacific, as reflected by below average (≤ -0.5 to -1.0°C) sea surface temperature anomalies (SSTAs). Majority of climate models suggest La Niña is likely to continue through Mar-April-May 2021 (~55% chance), with a rising probability of returning to ENSO-neutral during April-May-June 2021 (~60%).

La Niña increases the likelihood of having above normal rainfall conditions across most areas of the country. Adverse impacts such as flooding and landslides are still expected over vulnerable areas and sectors of the country.

Assessment in February 2021

WEATHER SYSTEMS THAT AFFECTED THE COUNTRY

LOW PRESSURE AREA (LPA)

Areas of lowest pressure characterized by cloudiness and rainshowers; areas where a tropical cyclone can form

LOCALIZED THUNDERSTORM

Isolated heavy and dense dark clouds with one or more sudden electric discharges manifested by lightning and thunder often accompanied by showers of rain.

EASTERLIES

Warm winds blowing from the east that may bring cloudiness over the eastern part of the country

TAIL-END OF FRONTAL SYSTEM

Extended zone of converging winds
From east to northeast that often brings
thunderstorms and rainshowers

INTERTROPICAL CONVERGENCE ZONE (ITCZ)

Series of low pressure areas brought about by converging northeast (NE) and southeast (SE) winds that cause thunderstorms and rainshowers

NORTHEAST MONSOON (AMIHAN)

Cold winds from the northeast that bring rains over the eastern side of the country.

1 TROPICAL CYCLONE

STS "Auring" February 17-22

RAINFALL CONDITION

ABOVE NORMAL

120% greater than the normal

Most parts of the country

NEAR Normal

+20% or -20% from the

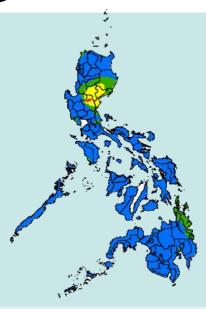

Benguet, Ifugao, Nueva Ecija, Dinagat, Surigao

BELOW NORMAL

20%-60% reduction from the normal

Nueva Viscaya, Quirino, Aurora

TEMPERATURE

Generally, slightly cooler to near average surface temperatures were observed in most parts of the country. Moreover, surges of cold temperatures became prevalent during the month due to enhanced NE monsoon.

0 or 1 TROPICAL CYCLONES

"Bagyo"; may refer to tropical depression, tropical storm, severe tropical storm, typhoon, or super typhoon.

INTERTROPICAL CONVERGENCE ZONE (ITCZ)

Series of low pressure areas brought about by converging northeast (NE) and southeast (SE) winds that cause thunderstorms and rainshowers

thunderstorms and rainshowers (((H RIDGE OF HIGH PRESSURE AREA (HPA)

An extension of a high pressure area characterized by very light wind and clear skies

From east to northeast that often brings

ABOVE NORMAL

120% greater than the normal

Most parts of the country

BELOW NORMAL

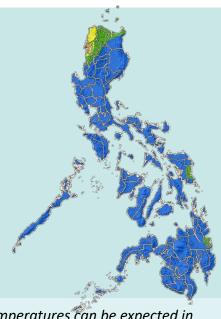

20%-60% reduction from the normal

NORMAL

+20% or -20% from the normal

Ilocos Norte, Ilocos Sur, Abra, Apayao, Batanes

TEMPERATURE

Generally, slightly cooler to near average air temperatures can be expected in most parts of the country. Occasional surges of cold temperatures will still be prevalent over the northern portions of Luzon.

Mountainous Luzon 11.3°C - 28.8°C

Lowlands Luzon 18.5°C - 37.9°C

Metro Manila 21.0°C to 36.6°C

Mountainous Mindanao 14.1°C - 34.4°C

Visayas 19.5°C - 36.2°C

Lowlands Mindanao 17.5°C - 38.7°C
