TRACK AND INTENSITY OUTLOOK

- JULIAN is forecast to move generally westward to northwestward while decelerating over the Bashi Channel today and will begin recurving tomorrow (1 October) while moving slowly, then turn generally northeastward on Wednesday (2 October) towards the southwestern coast of Taiwan, where it is forecast to make landfall on Wednesday. JULIAN may briefly leave the Philippine Area of Responsibility (PAR) during this period but bulletins are expected to continue. The typhoon will then cross the rugged terrain of Taiwan and emerge over the waters east of Taiwan by Wednesday evening or Thursday (3 October) early morning. Afterwards, the typhoon will gradually accelerate northeastward towards the East China Sea and exit the PAR region on Thursday.
- JULIAN will continue intensifying and may reach super typhoon category this afternoon or evening. Interaction with the rugged terrain of Taiwan will trigger a weakening trend prior to landfall.

Considering these developments, the public and disaster risk reduction and management offices concerned are advised to take all necessary measures to protect life and property. Persons living in areas identified to be highly or very highly susceptible to these hazards are advised to follow evacuation and other instructions from local officials. **For heavy rainfall warnings, thunderstorm/rainfall advisories, and other severe weather information specific to your area, please monitor products issued by your local PAGASA Regional Services Division.**

The next tropical cyclone bulletin will be issued at 11:00 PM today.
