

TROPICAL CYCLONE BULLETIN NR. 27F
Typhoon JENNY (KOINU)

Issued at 5:00 AM, 06 October 2023

TYPHOON "JENNY" WEAKENS AND IS NO LONGER DIRECTLY AFFECTING THE COUNTRY.

Location of Center (4:00 AM)
The center of the eye of Typhoon JENNY was estimated based on all available data at 385 km West Northwest of Itbayat, Batanes (OUTSIDE PAR) (21.8°N, 118.3°E)
Intensity
Maximum sustained winds of 120 km/h near the center, gustiness of up to 150 km/h , and central pressure of 975 hPa
Present Movement
Westward at 10 km/h
Extent of Tropical Cyclone Winds
Strong to typhoon-force winds extend outwards up to 200 km from the center

TROPICAL CYCLONE BULLETIN NR. 27F

Typhoon JENNY (KOINU)

Issued at 5:00 AM, 06 October 2023

HAZARDS AFFECTING LAND AREAS

Heavy Rainfall Outlook

Typhoon JENNY is less likely to directly bring heavy rainfall over the country throughout the forecast period. Furthermore, the effect of the typhoon on the Southwest Monsoon has weakened, although the western section of Luzon may still experience some rainshowers. The public is advised to refer to the **24-Hour Public Weather Forecast and Outlook** issued at 4:00 AM today.

Severe Winds

The lifting of all wind signals indicates that severe winds from JENNY no longer affects the country. The weaker enhancement of the Southwest Monsoon by JENNY may still bring **infrequent gusty conditions** for the next 3 days over the western sections of Northern and Central Luzon, especially in coastal and upland/mountainous areas exposed to winds.

HAZARDS AFFECTING COASTAL WATERS

The Gale Warning for coastal waters has been lifted. Nevertheless, in the next 24 hours, JENNY may still bring **moderate to rough seas (1.5 to 3.0 m)** over the coastal waters of Batanes, the western portion of Babuyan Islands, Ilocos Norte, and Ilocos Sur. **Mariners of motor bancas and similarly-sized vessels are advised to take precautionary measures while venturing out to sea and, if possible, avoid navigating in these conditions, especially if inexperienced or operating ill-equipped vessels.**

TRACK AND INTENSITY OUTLOOK

- Outside the PAR region, JENNY will continue to move westward (becoming west southwestward to southwestward by Sunday) slowly over the coastal waters of southeastern China.
- JENNY is forecast to remain a typhoon until today or early tomorrow before entering a sustained weakening trend. The typhoon is forecast to become a remnant low by late Monday or early Tuesday.

Considering these developments, the public and disaster risk reduction and management offices concerned are advised to take all necessary measures to protect life and property. Persons living in areas identified to be highly or very highly susceptible to these hazards are advised to follow evacuation and other instructions from local officials. **For heavy rainfall warnings, thunderstorm/rainfall advisories, and other severe weather information specific to your area, please monitor products issued by your local PAGASA Regional Services Division.**

With this development and unless re-entry occurs, this is the final tropical cyclone bulletin. Subsequent updates will be provided in the **24-Hour Public Weather Forecast and Outlook** at 4:00 PM today.
