TROPICAL CYCLONE ADVISORY NR. 4
Tropical Storm HAIKUI

Issued at 11:00 PM, 28 August 2023

Valid for broadcast until the next bulletin at 11:00 AM tomorrow.

GENERAL OUTLOOK FOR THE FORECAST PERIOD

- HAIKUI is forecast to move generally west northwestward over the Philippine Sea until Friday and may enter the Philippine Area of Responsibility (PAR) region on Wednesday afternoon or evening. Once inside the PAR, the domestic name "HANNA" will be assigned to this tropical cyclone. A generally northwestward turn may take place beginning Friday evening or Saturday morning as it moves over East China Sea.
- HAIKUI is forecast to steadily intensify over the next five days. It may reach severe tropical storm category within 48 hours (either prior or after entering PAR) and become a typhoon over the northeastern PAR region.
- The current forecast scenario suggests that HAIKUI is less likely to directly affect the country. However, it may enhance the Southwest Monsoon beginning on Wednesday or Thursday. This may result in the continuation of occasional or monsoon rains over the western portion of Luzon and Visayas throughout this week.

Considering these developments, the public and disaster risk reduction and management offices concerned are advised to continue monitoring for updates related to this tropical cyclone.

Unless an intermediate advisory or initial tropical cyclone bulletin is released, the next tropical cyclone advisory will be issued at 11:00 AM tomorrow.
