## **TROPICAL CYCLONE ADVISORY NR. 8**

### **Severe Tropical Storm HAIKUI**

Issued at 11:00 AM, 30 August 2023

Valid for broadcast until the next advisory at 11:00 PM today.

#### **GENERAL OUTLOOK FOR THE FORECAST PERIOD**

- HAIKUI is forecast to move generally west northwestward or northwestward throughout the forecast period and may enter the Philippine Area of Responsibility (PAR) this afternoon or evening. Once inside the PAR, the domestic name "HANNA" will be assigned to this tropical cyclone. On the forecast track, this tropical cyclone is forecast to remain far from the Philippine landmass and may exit the PAR on Friday morning while approaching the Ryukyu Islands. Outside the PAR region, HAIKUI will turn northwestward or northward northwestward over the East China Sea.
- HAIKUI is forecast to become a typhoon within the PAR region and may reach its peak intensity on Friday as it approaches the boundary of the PAR. It is forecast to continuously intensify within the next 5 days.
- The current forecast scenario suggests that HAIKUI is less likely to directly affect the country. However, it may enhance the Southwest Monsoon beginning tomorrow or Thursday. This may result in the continuation of occasional or monsoon rains over the western portion of Luzon and Visayas throughout this week.

Considering these developments, the public and disaster risk reduction and management offices concerned are advised to continue monitoring for updates related to this tropical cyclone.

Unless an intermediate advisory or initial tropical cyclone bulletin is released, the next tropical cyclone advisory will be issued at 11:00 PM today.
